

GS High Voltage High Resistance Thick Film Resistors

Coating color : Brown
Marking : Alphanumeric

Construction

Features

- Miniature construction endurable to high voltage and high power.
- Resistors excellent in anti-surge characteristics.
- Wide resistance range of 500kΩ~10GΩ and small T.C.R.
- Products meet EU-RoHS requirements. EU-RoHS regulation is not intended for Pb-glass contained in resistor element and Pb contained in Brass cap.

Applications

- Copying machines.
- LBPs.
- Charging and discharging resistors for power supply circuits.
- High voltage dividing resistors.

Rated Ambient Temperature : +25°C

Operating Temperature Range : -55°C ~ +125°C

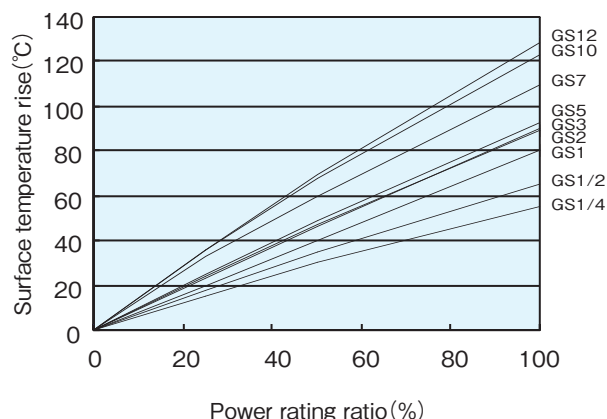

Rated voltage = √(Power Rating × Resistance value) or Max. working voltage, whichever is lower.

Derating Curve

For resistors operated at an ambient temperature of 25°C or higher, the power shall be derated in accordance with the above derating curve.

Resistance to solvent	No evidence of damage to protective coating and marking.	Soaking in IPA for 1min and brushing 10 times -3 cycles- liquid temp. 25°C $\pm 5^\circ C$
Impulse withstand voltage	No abnormality in appearance and flash-over.	An impulse voltage shall be applied 5 times at an interval of 1min.

Precautions for Use

- Impulse withstanding voltage is specified for waveform of 1/40 μs or 1.2/50 μs as a standard. Please inquire of us in advance when using other than the standard waveform, since the specified value may change, depending on time constant or length of wave tail.
- Use the components under less dusty places, as continual applying of high voltage makes dust adhere to the surface of the resistors and causes surface leakage and corona. Also periodic cleaning of the surface of resistors is needed.
- Use them at 50% or under of the rated power for stable use for a long time.
- Do not touch the resistors with high resistance value by hand to prevent surface-leakage current.
- Set the products away from near electric conductors 1cm or over per 3kVd.c. to avoid occurrence of corona and short-circuit by discharge, if there are electric conductors near to.
- Ceramic is used for the core of these resistors. Pay attention to the handling as the characteristics may be deteriorated by damage and inner crack when they are fallen or shocked.
- In case of using in oil, inquire of us in advance.
- Take care that the resistors may become instable in resistance value by absorption of humidity when they are stored or used in high humidity environment.
