RN73R Metal Film Flat Chip Resistors (High reliability)

Coating color : Black

■ Features
- SMD metal film resistors.
- High precision type ±0.05% is also available as standard.
- High performance T.C.R. ±5×10⁻⁶/K is also available as standard.
- Low current noise.
- Operating temperature range −155℃.
- Rated ambient temperature : 85℃
- High reliability with ΔR of ±0.1% to ±0.25% in the long-term reliability test.
- Endurance at 85℃ (1,000h) : ΔR of ±0.1%
- Improved moisture resistance by high humidity protective coating.
- Suitable for control circuits in various industrial equipment.
- Suitable for both flow and reflow solderings.
- Products meet EU-RoHS requirements.
- AEC-Q200 qualified.

■ Applications
- Automotive electronics
- Industrial equipment
- Measurement equipment
- For higher precision, RN73H series is available.

Reference Standards
IEC 60115-8
JIS C 5201-8
EIAJ RC-2133A

■ Specifications
- If any questions arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature" in your usage conditions, please give priority to the "Rated Terminal Part Temperature".
- Rated voltage = Power Rating×Resistance value or Max. working voltage, whichever is lower.
- Operating Temperature Range: −55℃〜+155℃

■ Type Designation
- Contact us when you have control request for environmental hazardous material other than the substance specified by EU-RoHS.
- For further information on taping, please refer to APPENDIX C on the back pages.

■ Type

- **Resistance (Ω)**
  - E24 ・ E96 ・ E192

- **Tolerance**
  - A: ±0.05%
  - B: ±0.1%
  - C: ±0.5%
  - D: ±0.25%
  - F: ±1%

For more details, please refer to the "Introduction to the derating curves based on the terminal part temperature" on the beginning of our catalog.

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

Contact our sales representatives before you use our products for applications including automobiles, medical equipment and aerospace equipment.

Malfunction or failure of the products in such applications may cause loss of human life or serious damage.

www.koaglobal.com
For resistors operated at an ambient temperature of 85℃ or higher, the power shall be derated in accordance with the above derating curve.

For resistors operated at an ambient temperature of 85℃ or higher, the power shall be derated in accordance with the above derating curve.

When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve.

※ Please refer to "Introduction of the derating curves based on the terminal part temperature" on the beginning of our catalog before use.

■ Precautions for Use

- The properly and electrostatically measured taping materials are used for the components, but attention should be paid to the fact that there is some danger the parts absorb on the top tapes to cause a failure in the mounting and the parts are destructed by static electricity (1J, 2A, 2B, 2E: 1kV and more, 1E: 0.5kV and more at Human Body Model 100pF, 1.5kΩ) to change the resistance in the conditions of an excessive dryness or after the parts are given vibration for a long time as they are packaged on the tapes. Similarly, care should be given not to apply the excessive static electricity when mounting on the boards.

- Ionic impurities such as flux etc. that are attached to these products or those mounted onto a PCB, negatively affect their moisture resistance, corrosion resistance, etc. The flux may contain ionic substances like chlorine, acid, etc. while perspiration and saliva include ionic impurities like sodium (Na⁺), chlorine (Cl⁻) etc. Therefore these kinds of ionic substances may induce electrical corrosion when they invade into the products. Either thorough washing or using RMA solder and flux are necessary since lead free solder contains ionic substances. Washing process is needed, before putting on moisture proof material in order to prevent electrical corrosion.

- When heat-resistant masking tapes are attached to the chip resistors at the time of mounting and then detached, there is a possibility of exfoliation of the top electrodes. It is known that the heat applied in the mounting process will enhance the adhesion strength of the tape adhesive so please avoid the use. If the use of masking tapes are unavoidable, then please be sure not to attach the tape adhesives directly on the products.

When high-pressure shower cleaning is implemented, there is a possibility of exfoliation of the top electrodes caused by the water pressure stress so please avoid the implementation.

If the implementation is unavoidable, then please evaluate the products beforehand.
