

## RS73-RT High Reliability Chip Resistors (Anti Sulfuration)

Coating color : Black

### Construction

### Features

- Excellent anti-sulfuration characteristic due to using high sulfuration-proof inner top electrode material.
- Metal-glaze thick film resistor for surface mounting.
- High precision resistor with T.C.R.  $\pm 25 \times 10^{-6}/K$  and tolerance  $\pm 0.1\%$ .
- High reliability with  $\Delta R$  of  $\pm 0.2\% \sim \pm 0.5\%$  in the Reliability test.
- Suitable for both flow and reflow solderings.
- Products with lead free termination meet EU-RoHS requirements. EU-RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified.

### Applications

- Car electronics, Industrial equipment, Industrial measurement

### Reference Standards

IEC 60115-8  
JIS C 5201-8  
EIAJ RC-2134C

Operating Temperature Range :  $-55^{\circ}C \sim +155^{\circ}C$

Rated voltage =  $\sqrt{\text{Power Rating} \times \text{Resistance value}}$  or Max. working voltage, whichever is lower.

For flat chip jumper resistor, please refer to RK73Z series.

※1 Measurement Temperature:  $+25^{\circ}C/+125^{\circ}C$ . Cold T.C.R. ( $-55^{\circ}C/+25^{\circ}C$ ) is  $-50 \sim +25 \times 10^{-5}/K$ .

※2 Please inquire of us about E192.

If any questions arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature" in your usage conditions, please give priority to the "Rated Terminal Part Temperature".

For more details, please refer to "Introduction of the derating curves based on the terminal part temperature" on the beginning of our catalog.

## Derating Curve

For resistors operated at an ambient temperature of 85°C or higher, the power shall be derated in accordance with the above derating curve.

When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve.

※Please refer to "Introduction of the derating curves based on the terminal part temperature" on the beginning of our catalog before use.

## Precautions for Use

- The substrate of chip resistors is alumina. Cracks may occur at the connection of solder (solder fillet portion) due to the difference of the coefficient of thermal expansion from a mounting board when heat stress like heat cycle, etc. are repeatedly given to them. Care should be taken to the occurrence of the cracks when the change in ambient temperature or ON/OFF of load is repeated. The occurrence of the crack by heat stress may be influenced by the size of a pad, solder volume, heat radiation of mounting board etc., so please pay careful attention to designing when a big change in ambient temperature and conditions for use like ON/OFF of load can be assumed.
